The Distribution Charge represents Washington Electric's costs of delivering power from the substations to members' meters. It includes the monthly facility charge, which covers the cost of having the poles, lines, transformers and metering in place to provide basic electric service to the member.

This shows the rising cost of generation and transmission over time.

The Generation and Transmission Charge shows the per-kWh cost of making the electricity and delivering it from the plant to Washington Electric's substations. This is the amount Washington Electric is charged to purchase the power from the plant. In other words, it's the cost of wholesale power.
